

# Exercise: Build a Basic Web Page

**Objective:** Create a web page that introduces a fictional company, utilizes proper HTML structure, includes semantic elements, and contains a contact form.

## Instructions:

1. **Introduction to HTML and Web Development**
  - Set up a basic HTML5 document structure.
  - Add a title to the webpage that includes the name of the fictional company.
2. **HTML Elements and Structure**
  - Create a header for the company with a logo (you can use a placeholder image) and a navigation menu (with links to Home, About, Services, Contact).
  - Add a main content area that includes:
    - A welcome section with a headline and a paragraph.
    - An about section with an image and text describing the company.
3. **Semantic HTML and Accessibility**
  - Use appropriate semantic tags for the header, navigation, main content, and footer.
  - Include alternative text for images to ensure accessibility.
4. **HTML Forms and Input Elements**
  - Create a contact form in a dedicated contact section. The form should include fields for:
    - Name (text input)
    - Email (email input)
    - Subject (drop-down select)
    - Message (textarea)
    - A submit button
  - Ensure that necessary fields are marked as required.

## Requirements:

- Use proper indentation and formatting.
- Ensure that all HTML elements are properly nested and closed.
- Validate the HTML to make sure it meets standard guidelines.
