Project: Styling a Profile Card

Overview

In this project, you will have the opportunity to showcase your CSS styling skills by working on a profile card design. The HTML structure has already been provided for you, and your task is to style the profile card using CSS to make it visually appealing and modern.

Instructions

Step 1: Understand the Structure

1. Open the `profile-template.html` file in a code editor of your choice.
2. Take a moment to review the HTML structure provided to you. You'll notice that the main content is wrapped in a `<div>` element with the class `profile-card`.

Step 2: Style the Profile Card

1. Open the `styles.css` file in the same directory as the HTML file.
2. Your task is to style the profile card to create an attractive and modern design. You have the freedom to adjust colors, typography, spacing, and other visual aspects.
3. Use CSS selectors to target specific elements within the `.profile-card` class and apply your styling.
